Financial Health of Gig Workers: Introduction and Research Design
This report is under the i3 Program, funded by MetLife Foundation.

The United Nations Capital Development Fund offers “last mile” finance models that unlock public and private resources, especially at the domestic level, to reduce poverty and support local economic development.

The Centre for Financial Health acts as a convener, providing a platform to bring together global, regional and local actors committed to using financial and digital solutions to improve the financial lives of low-income families—helping them climb – and stay – out of poverty.

Introduction
Technology has substantially transformed most of what we do, from the manner in which we exchange goods, communicate to family and friends and access transport to the way we consume food and make payments. The proliferation of platforms and mobile apps as well as the conduit facilitating their use—smartphones—are at the heart of most of this change.

New economic models have arisen as a result, that combine technology and business ideas in inconceivably novel ways. One such model is a labor market of sorts where convenience and speed are the norm—the on-demand gig economy.

We call it on-demand because the access to and procurement of labor is immediate. And we call it gig because of the underlying eponymous “temporary work contracts”, or “gigs”. Gig workers are also referred to as flexible employment workers or independent workers.
What is the Gig Economy?

The gig economy does not have an absolute definition, but rather is a continuum spanning different combinations of interactions between workers and organizations. Despite these various intersections, the core features of the gig economy could be pinned down to the following three aspects:

- Temporary work or “gigs”;
- On-call or temporary contracts with platforms or employers;
- The use of tech platforms.
How Big is the Gig Economy?

By 2025, the gig economy is expected to contribute $2.7 trillion USD (around 11.3 trillion MYR or 18.9 trillion RMB) to the global economy.

What is Financial Health?

Financial health comprises the following dimensions:

**Financial Freedom**
The ability to meet one's financial goals and enjoy life on one's terms. This is a step-up from financial security and includes individual financial goals and things one values.

**Financial Security**
The ability to meet ongoing commitments, now and in the future, and under adverse circumstances. This includes a sense of preparedness for the expected (think retirement) and unexpected future (think COVID-19) or financial resilience. Financial resilience can be defined as the ability to cope with and recover from financial shocks.

**Financial Control**
The feeling of control over one's finances, reflecting a sense of self-efficacy and confidence in one's financial situation, now and looking to the future.

What does a gig worker have to say about financial health?

“Financial health is about getting to do what you want without worrying where the money is going to come from. It is about financial independence and no obligations to anyone.”

25 year-old male, part-time dispatch worker, Malaysia
Research Design
About this Research

This report seeks to understand the financial lives and aspirations of workers in the gig economy. In doing so, it explores the following questions:

- Why do workers choose the gig economy? What are their experiences in the gig economy?
- What is their financial health status? What are some key financial behaviors they demonstrate?
- How do they navigate their finances—what products and channels do they use? And, what barriers do they face?
- How has COVID-19 impacted them and how are they coping?

Research approach: Online surveys fielded between February and August 2020 among users of GoGet, FastJobs, foodpanda, and Grab platforms in Malaysia and self-employed truck drivers contracted through Lionbridge in China.

For more details on the research design, please read this brief.
GoGet is an on demand workforce technology facilitating short-term gigs.
